

## ART's Washington Update

### The Theory That Wireless Radiation is Safe is Crumbling.

The idea that radio-frequency (RF) microwave radiation is not harmful to humans has been promoted by the wireless industry and parroted by regulators and legislators for decades. It has been the underlying principle for all federal legislation and regulations since the Telecommunications Act of 1996.

While hundreds of studies from researchers around the world have demonstrated evidence of harm, the wireless industry has fought back vehemently, questioning both the research and the researchers, and claiming the science isn't clear.

But now the government's own National Institutes of Health has completed its 10-year, \$30-million-dollar study, and the results are clear: exposure to wireless radiation increases the risk of cancer.

Now the question is, ***what are legislators going to do about it?***

That's the question we'll be raising this week as we commence our second wave of "legislator education" on Capitol Hill. We'll be explaining the basics of 5G, addressing the long-outdated FCC exposure guidelines, highlighting the failure of the FDA to acknowledge the results of the NIH study, and discussing Congress's role in protecting public health.

We have thirty six meetings scheduled in two days with Republican and Democratic members who sit on key congressional committees, laying the groundwork for your phone calls! (See below).

### **There's Nothing Like a Phone Call**

We're using social media and special videos to reach people in the districts of key legislators who sit on committees overseeing the FCC and FDA. We're encouraging them to learn more about the issue, and then call Washington

and voice their opposition to the roll out of 5G. We have campaigns currently running in Pennsylvania, South Dakota, New Jersey and Hawaii.

We know for certain that phone calls to the offices of federal legislators are absolutely the most powerful tool we have in this fight to stop the race to roll out 5G. . **Please keep calling**, and encourage everyone in your network to do the same.

## ***What 5G could mean for real estate.***

4 bdr, 2 bath, EIK, LR, FR w/fireplace, all new appliances, great 5G wireless reception!

**\$ 340,000**

4 bdr, 2 bath, EIK, LR, FR w/fireplace, all new appliances, fully wired with fiber optic!

**\$ 425,000**

Nobody wants to buy a home with a radiation-emitting 5G transmitter on the property, especially now that the National Institutes of Health has found “clear evidence” of cancer from exposure to wireless radiation.\*

Americans have a right to protect their property values and to the peaceful enjoyment of their homes without constant involuntary exposure to radiation from nearby transmitters.

Please join us in our effort to stop the deployment of millions of new 5G antennas in residential neighborhoods across America.
